

MobileTrackn

FEATURES

The Spectre-1 is an on-demand, real-time digital GPS tracking device with no external antenna's. This design allows an easy and non-obtrusive installation in a wide variety of vehicles.

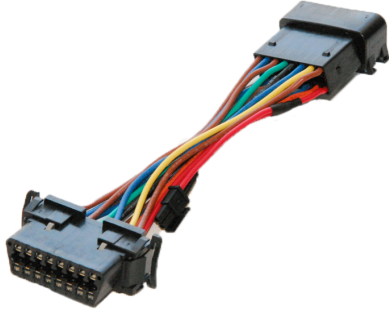

SPECTRE-1 Features

- **Instant Access 24/7**
- **Easy Web Interface**
- **No External Antennas**
- **Nationwide Coverage**
- **Over-the-air Configuration**
- **Electronic Geo-Fencing**
- **Door Unlock**
- **Low Battery**
- **Speed Notification**
- **Alarm Reporting**

The Spectre-1 calculates precise locations from the GPS satellite constellation and communicates this back using a digital cellular (GSM) network. It can automatically send this information to the user in real-time, or on-demand when the user remotely requests it. The device is also capable of monitoring and controlling non-GPS information such as asset theft alarms, battery levels, and ignition-based movements.

With only a **two-wire** interface and a low power consumption, this device can be permanently installed in any vehicle or outdoor asset for which a 5-30vdc power source is available.

MobileTrackn

Or, with the optional **OBD-II** permanent adapter, it can be installed without any wire-splicing or electrical know-how. It can also be installed on a non-permanent basis and relocated between multiple vehicles using the optional cigarette-lighter adapter or the optional OBD-II temporary adapter.

Power draw is less than traditional GPS asset tracking devices and the Spectre-1 will operate reliably even when the asset battery is not being consistently charged. A typical car battery can power the Phantom-1 for 60 days or longer with the ignition off. An optional back-up battery pack can provide additional power for up to 15 hours in the event that the primary power source is removed. In this scenario, when primary power is reapplied the backup battery pack is recharged and will be ready to protect the asset again for up to 7 years before needing replacement.

Instant Access 24/7

Whether your teenager borrows the family car and was due back hours earlier, or whether that parking spot where you left your car in at the mall is now empty: don't panic. Your stolen or missing vehicle is tracked within minutes to within meters of its reported position anywhere in North America. You always have secure and instant access to your vehicle's current location at your fingertips, leading to a quicker and safer resolution to your problem.

Remote Door Unlock

Have you ever stepped out of your car and shut the door only to realize a moment too late that you are standing outside while your keys are locked inside? Don't panic. With MobileTrackn's Spectre-1 you could use any internet accessible computer to securely "call and command" your car to have the doors unlocked and the alarm system disarmed within minutes. Now you can retrieve your keys... no locksmith's bill, no stress, no hassle. It's that simple.

MobileTrackn

Low Battery Warning

Whether you live in areas where outside temperatures dip to sub arctic levels in winter, or whether you store your vehicle unused for long periods, or whether there is just a power problem with your vehicle's battery, you can count on being notified automatically if your battery starts to lose its charge. Furthermore, with an optionally installed remote starter, you can simply send a command via the internet web site or by phone to start the vehicle, recharging your battery to ensure full power when you're ready to use your vehicle.

Electronic Geo-Fencing

Do you want to know if your car stays where you parked it when you're out running errands, at work, or on vacation? Or if your kids decide to use your car without permission? No problem. By using our Electronic Fence feature, MobileTrackn automatically monitors your vehicle by setting an electronic perimeter around it at your command. Should your car be moved beyond this boundary, you will know about it.

Speed Notification

If you're concerned about the driving habits of people to whom you entrust the use of your vehicle, MobileTrackn can alert you to any excessive driving speeds by selecting a preset speed limit. Reduce the incidence of illegal speeding and dangerous driving manoeuvres that jeopardize driver safety, contribute to premature vehicle wear and tear as well as the potential for the unwelcome penalty of a speeding violation.

Alarm Reporting

Should your vehicle's alarm be triggered, your MobileTrackn unit can report this to you immediately.
